*Rand article from wiki

By the late 1850s the first examples of instantaneous photography came about and provided hope that motion photography would soon be possible, but it took a few decades before it was successfully combined with a method to record series of sequential images in real-time. In 1878, Eadweard Muybridge eventually managed to take a series of photographs of a running horse with a battery of cameras in a line along the track and published the results as The Horse in Motion on cabinet cards. Muybridge, as well as Étienne-Jules Marey, Ottomar Anschütz and many others would create many more chronophotography studies. Muybridge had the contours of dozens of his chronophotographic series traced onto glass discs and projected them with his zoopraxiscope in his lectures from 1880 to 1895. Anschütz developed his own Electrotachyscope in 1887 to project 24 diapositive photographic images on glass disks as moving images, looped as long as deemed interesting for the audience.

As a medium, film is not limited to motion pictures, since the technology developed as the basis for photography. It can be used to present a progressive sequence of still images in the form of a slideshow. Film has also been incorporated into multimedia presentations and often has importance as primary historical documentation. However, historic films have problems in terms of preservation and storage, and the motion picture industry is exploring many alternatives. Most films on cellulose nitrate base have been copied onto modern safety films. Some studios save color films through the use of separation masters: three B&W negatives each exposed through red, green, or blue filters essentially a reverse of the Technicolor process. Digital methods have also been used to restore films, although their continued obsolescence cycle makes them as of 2006 a poor choice for long-term preservation. Film preservation of decaying film stock is a matter of concern to both film historians and archivists and to companies interested in preserving their existing products in order to make them available to future generations and thereby increase revenue. Preservation is generally a higher concern for nitrate and single-strip color films, due to

their high decay rates black-and-white films on safety bases and color films preserved on Technicolor imbibition prints tend to keep up much better, assuming proper handling and storage.

Canceled events include the Swiss International Film Festival and Forum on Human Rights, planned for early March47 the Red Sea International Film Festival, which was to be held for the first time in March 20207 the March 2020 South by Southwest SXSW, which would have included film screenings54 the 2020 BFI Flare: London LGBTIQ+ Film Festival55 Nickelodeons 2020 Slimefest festival5657 Qumra, the Doha Film Institutes international directors conference Hong Kong Filmart, a large film market event the National Association of Theatre Owners CinemaCon 202058 and Lilles Series Mania television festival.31 The 22nd edition of Ebertfest and the 44th edition of the Cleveland International Film Festival are cancelled.5960 New Jerseys global film festival, Garden State Film Festival, scheduled for March 25–29, cancelled their in-person Asbury Park-based festival, however will be proceeding with the original schedule in a real-time live-streaming online format.61 The 55th Karlovy Vary International Film Festival was canceled and postponed to 2021 its organizers later announced plans to hold an unofficial 54 ½ edition in November,62 but it was cancelled due to the reinstatement of restrictions in the country.63
